APPENDIX G

SIERRA MADRE MOUNTAIN RANGE By: Nikko Pederson and Jesler Molina

#### PHYSICA

The Sierra Madre range contains soil that is very acidic due to high levels of hydrothermally altered rock. The pH levels of the soil deriving from these degrading rocks range from 3.5 to 4.5.7 Bio-energy, i.e., energy produced from waste, such as the Monterrey III project, is one of the many energy projects in the region.8 There also are several dams maintained in the Sierra Madre that are used primarily for fresh water and energy. The major minerals found here are silver, gold, iron, cobalt, copper, lead, zinc, antimony, nickel, and uranium.9 Silver is exceptionally prevalent in this area and contributes to Mexico maintaining its dominance as the world's largest silver provider.<sup>10</sup> Mexico supplies 16 percent of the world's silver.<sup>11</sup> Fresh water is very affluent in each of the Sierra Madre distributions. Each one of them represents a very important source of natural water; however, the most important sources of fresh water are the

Open Working Group session on Sustainable Development Goals

Jesler Molina makes his statement to the committee

December 11, 2013

#### AMBASSADOR AND PERMANENT REPRESENTATIVE OF HUNGARY TO THE UNITED NATIONS

Rusty Butler, Ph.D.
Associate Vice President
International Affairs and Diplomacy
Utah Valley University
800 W. University Pkwy
Orem, UT 84058-5999

New York, 2 January 2014

Dear Dr. Butler,

It was a pleasure to host you and your delegation from Utah Valley University at the session of the UN Open Working Group on Sustainable Development Goals on December 9-11, 2013. The Official statement and recommendations made by Jesler Molina, representative of Utah International Mountain Forum (UIMF) on behalf of UVU delegation presented an invaluable contribution to the discussions and agenda. His comments, focusing on identifying new goals for the Post 2015 Agenda, echoed that from other groups.

It was a result of group efforts from UVU which highlighted both contributions from other member of UVU delegation like yourself, Dr. Brian Birch, Associate VP for Academic Affairs, Engaged learning and Carlos Alarco, another representative of UIMF, a coalition of UVU student clubs and involvement of your institution to the sustainable development agenda since 2006.

I salute your efforts in those areas and I am looking forward to continue working on joint promotion of sustainable development goals of the United Nations.

Sincerely

Ambassador Csaba Kőrösi Permanent Representative of Hungary to the United Nations Co-Chair of the UN Open Working Group on SDGs

Seventy-first session Item 19 (i) of the provisional agenda\* Sustainable development

#### Sustainable mountain development Report of the Secretary-General

#### Summary

Mountain and upland areas have a universal importance: they provide water and other global goods and services to humanity. However, mountain ecosystems are highly vulnerable to climate change, extreme weather events and land degradation and recover slowly from disasters and shocks. In the 2030 Agenda for Sustainable Development, Member States pledged to leave no one behind and stressed the importance of reaching those furthest behind first. Mountain communities in developing countries are particularly vulnerable and require special attention, given that one in three people in those areas is at risk of hunger and malnutrition.

To achieve the Sustainable Development Goals and the targets relating to mountains as well as to poverty, hunger, sustainable agriculture, climate change and gender equality, there is a need to prioritize mountain areas by focusing on the specific challenges they face and the opportunities they provide. Mountain-specific policies and the inclusion of mountain communities in decision-making processes and capacity development can improve the livelihoods of communities while also conserving and restoring mountain ecosystems. In particular, efforts should be made to increase scientific knowledge of mountains and collect disaggregated data for sound analysis, policy advice and, ultimately, for change,

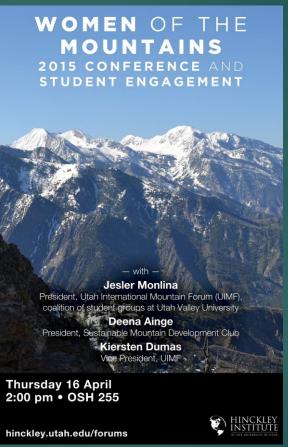

- The Utah International Mountain Forum hosted the fourth International Women of the Mountains Conference at Utah Valley University in October 2015 to address the critical issues faced by women and children living in mountainous regions across the globe and provide a forum to discuss gender equality. The outcome document contained the following observations:3
- Goal 5 could be achieved through strong support for improving women 's rights and welfare, including women's full and effective participation and equal opportunities for leadership at all levels of decision-making in political, economic
- Successful implementation of target 6.6 could be achieved by supporting the vital role that women play in the protection of the environment and water sources, particularly as custodians of traditional knowledge that builds resilience and allows for adaptation to climate change;
- With respect to target 15.1, women play a critical role in joint planning as promoters of innovation, development and cooperation for common benefit.
